

Polls

{exitpoll id=1}

Polls can be used to gauge your customers needs, or survey opinions.

The base CMS package solution includes a poll feature. Numerous polls can be created per site, allowing the business operator to evaluate specific customer or product issues, such as how the visitor found your site, or what products they are looking for. Polls make it very easy for site visitors to provide feedback.

This poll was placed within a content area; however, polls may be placed within the right or left colum of a web site, and viewed on whichever page you choose. These features are controled within the admin area of the site.
