## eCommerce Features

### Web-Page Manager

The jWebSolution eCommerce package is integrated into the CMS package solution; therefore, you can choose an existing Joomla Template Solution as the layout for your site, or we can custom create a layout which meets your business needs. The site features found in the CMS Features and Capabilities are also included in the eCommerce package. On top of these site features, the eCommerce package also includes a list of functionality specific to eCommerce, such as product cataloging and categories.

### Catalog Manager

This is a universal tool for managing products in the on line store. Each product can have an image, description, price and discounts. Shoppers will be able to search for products by keywords, categories, manufacturers, price and new entries. You can arrange your business products in any fashion you choose, and include an unlimited of product categories to present your business offerings. You can insert content that display different information and lead to different catalog pages. This feature makes the catalog navigation convenient. Your visitors will easily find what they are looking for and you can implement discount pricing on specific products.

### Inventory Control

Manage your inventory in the catalog and specify product attributes that control the behavior of the displays. For example, setting a stock limit can generate an alert of low product levels, and even remove the product from the web site to prevent oversells.

### Shop Manager

You can manage orders and view orders history, keep track of customer information and view Shop statistics from either the back-end or front-end.

### Shopping Cart

Shopping Cart enables customers to have more than one item on a single order, proceed to the check out or continue shopping.

#### Credit Card Payment Processing

The eCommerce package we provide allows for a number of payment options, including Credit Card and Pay Pal. The system allows access to most popular credit card and check processing providers, including Verisign PayflowPro, PayPal, 2Checkout, eWay, and many other payment methods. I am sure we will be able to set up a payment alternative which meets your business needs.
